AI VISIBILITY AUDIT & ACTION PLAN

The St. Regis Mexico City

Mexico City, Mexico

INITIAL DIGITAL PRESENCE ASSESSMENT

NOVEMBER 2026

1. Executive Audit Summary

Reconcile Event and Dining Inventories While Protecting Strong AI Presence

The St. Regis Mexico City has strong measured presence—71.9% AI Consideration, 91.7% Scenario Presence, and the second position among six certified Marriott Bonvoy peers. The priority is not broad awareness; it is source-of-truth precision where official event-room and dining frames differ, plus clearer representation of verified assets that remain weak in the certified attribute read.

Performance Snapshot

AI CONSIDERATION	SCENARIO PRESENCE	CERTIFIED PEER POSITION
71.9%	**91.7%**	**#2 of 6**
Mentioned in 138 of 192 comparable monitored AI answers	Present across 44 of 48 eligible traveler-need scenarios	Second-highest presence among 6 certified Marriott Bonvoy peers

AI Consideration is the share of comparable monitored answers mentioning the hotel; Scenario Presence is the share of eligible traveler-need scenarios where it appeared. Certified Peer Position uses the named governed peer set. These measures do not represent bookings, ADR, revenue, or traveler exposure.

Key Findings

1. Reconcile the 13-Room and 12-Room Event Inventory

The events page invites planners to review 13 meeting rooms, while later copy and the FAQ state that the hotel has 12 event rooms.

Why it matters. Planners need one setup-qualified inventory that explains whether pre-function or another space is included in only one count.

2. Publish One Dining Venue and Category Map

The official overview states 10 restaurants, while its dining journey names multiple restaurants and bars and separately presents private dining and in-room dining.

Why it matters. A signed category map can prevent omissions and apparent count conflicts across overview, dining, amenities, and partner feeds.

3. Strengthen Under-Recognized Dining, Family, and Event Facts

ADP recorded 0% recognition for on-site restaurant, private dining, room service, and ballroom capacity; family-friendly recognition was 5.2%, despite detailed official dining, children's, and event content.

Why it matters. Consistent, machine-readable facts can improve buyer context, without implying booking, ranking, ADR, or revenue causation.

TECHNICAL NOTES

ADP recognition is a prioritization signal, not proof of ranking, booking, ADR, or revenue causation.

6. Methodology, Responsibilities & Next Steps

Combines the pinned certified ADP lean baseline with a bounded review of named public pages, WebFetch retrieval, and zero-cost technical probes. No paid research, ADP remeasurement, production write, customer publication, or founder/customer approval was performed.

How to Read Findings

- VERIFIED_ISSUE — a directly observed, source-backed discrepancy.
- RECOMMENDED_INVESTIGATION — evidence warrants review but does not prove a defect or cause.
- REQUIRES_HOTEL_CONFIRMATION — leadership must establish the source of truth before correction.
- OPTIONAL_COMMERCIAL_OPPORTUNITY — proceed only if leadership wants the demand.

Responsibilities

- Hotel leadership confirms facts, priorities, and public changes.
- Digital, brand, and partner teams implement only approved corrections and document verification.
- Dealality packages measurement context and evidence without implying ranking, booking, ADR, or revenue causation.

How This Relates to Monthly Monitoring

Approved actions may be tracked later. Completing an action does not itself prove a change in AI presence, bookings, ADR, or revenue.

Suggested Next Step

Approve the highest-priority source-of-truth decision, then authorize only the validated work.
