Review Choice Origin Timeouts Without Overstating Impact

MEDIUM | NOT STARTED | NEEDS INVESTIGATION | Owner: Choice Digital / CDN Security Owner

WHAT WE FOUND

The zero-cost origin probe timed out on robots, sitemap, HEAD, and homepage GET, while the separate web fetch successfully retrieved the canonical hotel page.

RECOMMENDED ACTION

1. Retest the origin and canonical hotel path with logged timing and user agent.
2. Review CDN/WAF telemetry for the bounded probe window.
3. Confirm intended crawler policy.
4. Make only narrow approved changes if repeatable impact is verified.

6. Methodology, Responsibilities & Next Steps

Combines the pinned certified ADP baseline with the staged monthly-review reality gaps, a bounded review of named public pages, and zero-cost technical probes. No paid research, ADP remeasurement, production publication, or customer approval was performed.

How to Read Findings

- VERIFIED_ISSUE — a directly observed, source-backed discrepancy.
- RECOMMENDED_INVESTIGATION — evidence warrants review but does not prove a defect or cause.
- REQUIRES_HOTEL_CONFIRMATION — leadership must establish the source of truth before correction.
- OPTIONAL_COMMERCIAL_OPPORTUNITY — proceed only if leadership wants the demand.

Responsibilities

- Hotel leadership confirms facts, priorities, and public changes.
- Digital, brand, and partner teams implement only approved corrections and document verification.
- Dealality packages measurement context and evidence without implying ranking, booking, ADR, or revenue causation.

How This Relates to Monthly Monitoring

Approved actions may be tracked later. Completing an action does not itself prove a change in AI presence, bookings, ADR, or revenue.

Suggested Next Step

Approve the highest-priority source-of-truth decision, then authorize only the validated work.
