AI VISIBILITY AUDIT & ACTION PLAN

Wyndham San Diego Bayside

San Diego, California

INITIAL DIGITAL PRESENCE ASSESSMENT

NOVEMBER 2026

1. Executive Audit Summary

Fix Core Meeting Facts Before Treating the Peer Lead as Progress

Wyndham San Diego Bayside ranks first in its five-hotel Wyndham Rewards set, but 13.6% consideration and 34.8% scenario presence show a substantial absolute visibility gap. Management should treat the rank as relative context—not proof of strong visibility—and first repair the official meeting and operating facts that planners and automated systems rely on.

Performance Snapshot

AI CONSIDERATION	SCENARIO PRESENCE	CERTIFIED PEER POSITION
13.6%	**34.8%**	**#1 of 5**
Share of comparable monitored AI answers that mentioned the hotel	Eligible traveler-need scenarios where the hotel appeared	Highest presence among 5 certified Wyndham Rewards peers

AI Consideration is the share of comparable monitored answers mentioning the hotel; Scenario Presence is the share of eligible traveler-need scenarios where it appeared; Certified Peer Position compares only the certified five-hotel set. Presence does not equal bookings, revenue, or traveler exposure.

Key Findings

1. Visible and Machine-Readable Facts Conflict

The homepage shows blank meeting-stat placeholders, and two Hotel JSON-LD blocks publish opposing check-in/check-out pairs: 11:00/16:00 versus 15:00/11:00.

Why it matters. These are verified official-page defects. One hotel-approved operating fact set should replace blanks and conflicts before broader visibility work, because planners and automated systems need consistent basics.

2. The Meetings Page Supplies the Repair Standard

The official meetings page states 27,000 square feet and names rooms including the 10,384-square-foot Pacific Ballroom, giving the agency a concrete basis for reconciliation.

Why it matters. The task is not to invent a meetings proposition. It is to align homepage modules, structured data, room facts, and inquiry paths to a signed sales inventory.

3. Technical and Competitive Signals Remain Investigations

A Node probe received Cloudflare 403 responses while browser access worked, and ADP observed Hotel del Coronado displacement without establishing why.

Why it matters. Neither signal proves an outage, crawler block, or content cause. Bounded, documented partner review should precede any security change or public competitive positioning claim.

Recommended Priorities

PRIORITY	ACTION	DESIRED OUTCOME
High	GM and agency: repair homepage facts and Hotel schema in 2–3 weeks	One accurate operating and meeting fact set
High	Sales and agency: reconcile named rooms and capacities within 30 days	Planner-ready official meeting information
Medium	Agency and security partner: investigate Cloudflare behavior	Documented intended-crawler access decision
Medium	Commercial team: review displaced scenarios and factual distinctions	Defensible San Diego positioning brief

EXECUTIVE TAKEAWAY

Wyndham San Diego Bayside's peer lead is useful context, but the business opportunity is to raise low absolute consideration from a cleaner foundation: accurate operating facts, complete meeting statistics, and a consistent 27,000-square-foot planner story.

2. Priority Findings & Opportunities

The most important verified corrections and opportunities for this hotel. Full research detail remains in the AVA record.

PRIORITY: HIGH · **PLATFORM:** OFFICIAL HOMEPAGE — MEETING PLACEHOLDERS AND HOTEL JSON-LD

Issue: The homepage leaves meeting-stat values blank. Two Hotel JSON-LD graphs conflict—check-in 11:00/check-out 16:00 versus check-in 15:00/check-out 11:00—while official meetings content states 27,000 square feet.

Why it matters: Guests, planners, and automated systems should receive one approved set of basic facts. Correcting the conflict protects information accuracy; it does not guarantee more AI mentions or bookings.

Recommended action: Fix Homepage Meeting Statistics and Conflicting Hotel Schema

1. Hotel signs off on check-in, checkout, meeting-space total, maximum capacity, and room count.
2. Agency populates or removes empty homepage statistic modules.
3. Developer consolidates conflicting Hotel JSON-LD values.
4. Archive before-and-after page and schema evidence.
5. Signed source-of-truth sheet records operational times and all homepage meeting statistics.

Responsible party: Hotel GM / Commercial Leadership

Evidence: Official homepage — meeting placeholders and Hotel JSON-LD

PRIORITY: MEDIUM · **PLATFORM:** OFFICIAL MEETINGS PAGE

Issue: The meetings page states 27,000 square feet and names rooms including the 10,384-square-foot Pacific Ballroom, while homepage meeting-stat values remain blank.

Why it matters: A planner should not need to reconcile different official presentations. One approved meetings fact set supports sales credibility without implying that content changes will create demand.

Recommended action: Align Meetings Facts Across the Homepage and Meetings Page

1. Meetings sales signs a room-by-room inventory covering total space, named rooms, capacities, and counting definitions.
2. Agency aligns the homepage, meetings page, and Hotel schema to that inventory.
3. Retain the 27,000-square-foot total only if the signed inventory confirms its scope.
4. Test meeting and wedding inquiry paths and archive live evidence.
5. A page-by-page comparison against the signed meetings fact sheet is complete.

Responsible party: Director of Sales / Meetings Leadership

Evidence: Official meetings page

PRIORITY: MEDIUM · **PLATFORM:** OFFICIAL HOMEPAGE

Issue: Automated Node requests to the homepage and robots target received Cloudflare 403 responses, while browser and WebFetch access succeeded. This is not proof of a public outage or universal crawler block.

Why it matters: The agency should establish whether intended search and AI crawlers receive official content before changing security rules. Investigation protects both accessibility and site security.

Recommended action: Investigate Cloudflare Access for Intended Crawlers

1. Open a Cloudflare review with timestamps and user agents.
2. Confirm the intended robots policy from an approved environment.
3. Compare WAF behavior for intended crawlers and ordinary automation.
4. Retest after any hotel-approved rule change.
5. A reproducible access matrix documents client, region, URL, status, and expected policy.

Responsible party: Digital Marketing Agency

Evidence: Official homepage

PRIORITY: MEDIUM · **PLATFORM:** WYNDHAM OFFICIAL HOMEPAGE

Issue: The certified ADP brief notes Hotel del Coronado displacement. The observation does not prove a content defect, traveler preference, or causal competitive advantage.

Why it matters: A focused review can clarify Wyndham's distinct downtown, bayside, transport, and meetings fit without attacking a different resort proposition or making unsupported superiority claims.

Recommended action: Review Defensible Differentiation From Hotel del Coronado

1. Review only the displaced ADP scenarios.
2. Compare verified official propositions and target occasions.
3. Select two or three factual Wyndham distinctions.
4. Approve any resulting content brief before publication.
5. A scenario-level worksheet separates verified differences, hypotheses, and unknowns.

Responsible party: Hotel Commercial Leadership

Evidence: Wyndham official homepage

PRIORITY: MEDIUM · **PLATFORM:** OFFICIAL WEBSITE

Issue: not a comprehensive paid link inventory.

Why it matters: Specific outreach over SEO volume

Recommended action: Qualify Destination/Partner Listing With Official URL

1. Identify inventory
2. Submit profile
3. Classify honestly
4. Opportunity owner and required facts confirmed with hotel leadership.
5. Outreach or listing update request filed with supporting evidence.

Responsible party: Hotel Sales / Marketing

Evidence: Official website

3. Digital Platform Assessment

Exact verified listings where available. Rows distinguish corrections, content improvements, distribution opportunities, verified-consistent listings, partial assessments, and research follow-ups. Access restrictions are not treated as content defects.

PLATFORM	LISTING	ASSESSMENT	FINDING	NEXT ACTION
No platform rows packaged.				

4. Website & Content Improvements

Specific hotel or brand pages that affect how travelers understand and select the property. This section does not repeat ADP traveler-intent analysis.

Page: Official website

Issue: The homepage leaves meeting-stat values blank. Two Hotel JSON-LD graphs conflict—check-in 11:00/check-out 16:00 versus check-in 15:00/check-out 11:00—while official meetings content states 27,000 square feet.

Recommended action: Fix Homepage Meeting Statistics and Conflicting Hotel Schema

1. Hotel signs off on check-in, checkout, meeting-space total, maximum capacity, and room count.
2. Agency populates or removes empty homepage statistic modules.
3. Developer consolidates conflicting Hotel JSON-LD values.
4. Archive before-and-after page and schema evidence.

Why it matters: Guests, planners, and automated systems should receive one approved set of basic facts. Correcting the conflict protects information accuracy; it does not guarantee more AI mentions or bookings.

MEDIUM	Review Defensible Differentiation From Hotel del Coronado	Hotel Commercial Leadership	Next 30 days	MEDIUM	View
MEDIUM	Qualify Destination/Partner Listing With Official URL	Hotel Sales / Marketing	Next 30 days	MEDIUM	View

7. Methodology & Limitations

Dealality AVA assesses the hotel's public digital presence. Listing existence and content assessment are tracked separately; Google Travel entities are not treated as Google Business Profile / Maps place listings. Assessment date: 2026-11-05. Readiness: see certification. ADP traveler-intent detail is limited to the Executive Audit Summary.
