

Brand AI Visibility — How to Read

Help Center guide · Matches the live Brand AI Visibility page **Audience:** Brand development, brand strategy, and commercial leadership **Last updated:** 2026-08-17

Use this guide while looking at the page. Section names below match the on-screen headings.

Page map

The page has two tabs at the top:

1. **Executive Summary** — portfolio-level view across your linked brands
2. **Detailed View** — one brand at a time

Above the tabs you will see:

- Page title and short description
- **Disclaimer** box (AI outputs can vary; interpret as observed model behavior)
- **Filters** row
- **Freshness strip** (Last monitored · Providers completed · Mode)
- Optional partial-monitoring banner when not all providers finished

Click **Run Report** after changing filters.

1. What this page shows

Brand AI Visibility shows how your hotel brands appear when owners, developers, and investors ask AI platforms commercially relevant questions about development, conversion, affiliation, and positioning.

It helps you answer:

- How often does my brand appear?
- Where is it missing?
- Do providers differ?
- Which peers appear instead?
- Which sources are cited?
- Does English differ from Spanish (when both are monitored)?
- Are key public brand / development pages reachable?

It does **not** mean Dealality recommends a brand, that AI “prefers” a brand, or that a cited website caused an answer.

2. Filters (top of page)

Every number is scoped by the filters you select, then **Run Report**.

ON-SCREEN CONTROL	WHAT IT DOES
Geography	Region for the monitored question set (for example, CALA, Global, North America, Europe)
Provider	Which AI platform’s answers are measured (OpenAI, Gemini, Perplexity, Claude), or All Providers
Language	Shown when more than one language has completed data (for example, English / Spanish)
Brand	Detailed View only — which linked brand you are inspecting
Intent	Detailed View only — optional filter on owner-intent question type
Reset	Returns filters to the default starting point
Run Report	Reloads results for the current filters

Tip: Change filters → click **Run Report** → read the freshness strip before interpreting KPIs.

3. Freshness strip

Before you trust any number, check:

LABEL	MEANING
Last monitored	Date of the latest completed monitoring window
Providers completed	For example, 4 of 4
Partial monitoring run	Appears when some providers finished and others did not — unfinished providers are not 0%
Mode	Usually Latest monitored results

This is **not** a live or continuous feed. Results update when a monitoring run is completed (manually governed in the pilot).

4. Executive Summary — section by section

Read top to bottom on the **Executive Summary** tab.

Executive Summary (insight tiles)

Key takeaways for the current filters — what changed, where you stand, and why it matters.

Use these as the opening narrative. Then confirm each claim in the sections below.

Portfolio Snapshot

Factual portfolio indicators for your linked brands — **no composite score**.

Typical tiles include:

TILE	HOW TO READ
Portfolio AI Presence	Share of monitored owner questions where at least one of your linked brands appeared
Brands Monitored	How many of your linked brands are included here (for example, 5 of 5)
Strongest Brand	Entitled brand with the highest Observed Presence in this geography
Best Competitive Position	Your brand with the best peer rank in this geography
Questions Missing	Questions where none of your brands appeared in the answer

Markets & Movement

BLOCK	HOW TO READ
Regional / Market View	Table of regions: Brands Monitored, Leading Brand, AI Presence, Best Rank Brand, Competitive Position
AI Presence Over Time	Line chart across completed monitoring periods (needs enough history; otherwise you will see an empty / insufficient-history state)

Not Monitored in a region means no comparable data yet — not a zero score.

Visibility Signals

BLOCK	HOW TO READ
Top Strengths	Highest AI Presence and best peer rank from current monitoring
Gaps / Risks	Weak coverage, brands not monitored, or questions where brands did not appear

Your Brands

Table of all brands linked to this company.

COLUMN	HOW TO READ
Brand	One row per linked brand. Click a row to open Detailed View for that brand.
AI Presence	How often this brand appeared in monitored AI answers. Higher % = more appearances. 0% = monitored but not observed. — / Not Monitored = no data yet.
Δ vs prior run	Change in AI Presence vs the previous comparable run, in percentage points (pp). May show Not Comparable or Insufficient History.
Competitive Position	Rank by AI Presence among the fixed peer set (for example, #1 of 15). Based on Observed Presence only.
Questions Missing	Shown as % (count) . Open Detailed View → Questions Missing Watchlist for the exact questions.
Top Decision Territory	Owner-intent question family where this brand appeared most often — not a weighted priority score.

Peer Context & Next Review

BLOCK	HOW TO READ
Competitive Snapshot	How your portfolio compares with peers under the current filters
Priority Review	Evidence-backed items worth reviewing next

Evidence, Sources & Discovery

BLOCK	HOW TO READ
Citation Intelligence	Whether monitored answers included citations, and owned vs third-party patterns
Source Landscape	Domains cited most often (citation frequency). Frequency ≠ influence or ranking power.
Provider Visibility	How Presence looks across providers for the portfolio / cohort
Public Discoverability	Separate public-URL baseline — not an AI Presence score
Language Comparison	English vs Spanish (or other languages) when both are monitored for a comparable cohort

5. Detailed View — section by section

Open **Detailed View** from the tab, or by clicking a brand row in **Your Brands**.

Brand Overview

Insight tiles for the selected brand and current filters.

Brand Detail

Topline KPIs for the selected brand (Presence, Competitive Position, Questions Missing, and change when available), plus the detail freshness strip.

Trends

Change across completed comparable monitoring runs for this brand. Insufficient history is shown explicitly — not as zero change.

Coverage Diagnostics

BLOCK	HOW TO READ
Provider Presence	Per-provider Observed Presence. Not Monitored and provider errors never display as 0% .
Owner-Intent Coverage	Presence by owner-decision question family (prompt family) — for example, Conversion, Branded Residences, Soft-Brand Affiliation

Questions Missing Watchlist

Monitored questions where this brand was **not observed**.

Watchlist modes:

MODE	HOW TO READ
Questions Missing	Questions where the subject brand was absent
Peers Appearing Where We Are Not	Cases where peers appear and your brand does not

Table columns typically include: Question · Prompt Family · Provider · Region · Language · Status · Peers Present · Evidence.

Use **Prompt family** to focus on one intent territory. Open **Evidence** to read the actual monitored answer.

Competitive / Peer Analysis

How this brand ranks among the fixed peer set in the selected geography and provider.

Note: Peer rank requires a **specific provider**. Under **All Providers**, use provider-specific views for rank.

AI vs Dealality Context

When available: observed AI answer pattern next to Brand Basics facts.

Review Items

Monitoring findings with linked evidence for this brand.

Citation & Source Intelligence

CONCEPT	HOW TO READ
Citation Rate	Share of responses with at least one citation
Owned Source Coverage	Share of responses citing at least one configured brand / parent / development domain
Cited Sources	Domains associated with answers — not proven causes of Presence or Missing

Public Discoverability

Public accessibility of official brand sources — factual baseline only, **not a score** and **not AI Presence**.

Example states you may see:

- **BASELINE_MEASURED** — a governed public check has been completed
- **CHECK_NOT_RUN** — the check has not been run yet

Language Comparison

When both languages are monitored for a comparable cohort, compare Presence / Missing side by side. Differences are observed — not proof of market preference.

Opportunity Engine

Reserved / future workflow area. Do not treat an empty Opportunity Engine as a Presence failure.

6. Provider vs All Providers

SELECTION	HOW TO READ
OpenAI / Gemini / Perplexity / Claude	Results from that provider’s completed monitoring only. Use this for Competitive Position rank.
All Providers	A derived comparison across completed providers — averages / missing-across-all / disagreement. Not a fifth combined AI model.

Practical tip: Start with one provider for a clean story. Switch to **All Providers** when you want to show disagreement or “missing on every provider.”

7. Evidence drawer

When you open **Evidence** from a Presence or Missing row, you should see:

- The monitored question
- The provider response for that run
- Associated citations when available

Use evidence to verify what the model said before deciding what to do internally. One response is not permanent truth — outputs can vary by run and provider.

8. Suggested first-read path (matches the page)

1. Confirm **Geography, Provider,** and **Language** → **Run Report**.
2. Read the **freshness strip**.
3. Scan **Executive Summary** insight tiles.
4. Read **Portfolio Snapshot**.
5. Scan **Your Brands** (strongest vs weakest).
6. Click your hero brand → **Detailed View**.
7. Check **Coverage Diagnostics** (Provider Presence + Owner-Intent Coverage).
8. Open **Questions Missing Watchlist** → one Evidence row.
9. Skim **Citation & Source Intelligence**.
10. Check **Public Discoverability** as a separate diagnostic.
11. If needed, switch **Language** or **All Providers** and compare.

9. Common misreads

MISREAD	BETTER READING
"High Presence means AI recommends us."	Presence means the brand was observed in monitored answers.
"Missing means our brand is weak."	Missing means absent from that answer under these filters.
"All Providers is the true score."	It is a derived comparison , not a combined model.
"A competitor domain was cited, so it caused our miss."	Citations are associated , not causal.
"Discoverability is low, so Presence is low."	They are separate diagnostics.
"Not Monitored means 0%."	Not Monitored means no comparable data yet .
"This is live."	You are viewing the latest completed monitoring window .

10. Short glossary (on-page terms)

TERM	MEANING
AI Presence	Share of monitored questions where the brand was observed in the answer
Portfolio AI Presence	Share of questions where at least one linked brand appeared
Competitive Position	Rank by AI Presence within the fixed peer set
Questions Missing	Monitored questions where the brand was absent
Δ vs prior run	Presence change vs the previous comparable monitoring run (pp)
Top Decision Territory	Prompt family with the strongest Presence for that brand
Owner-Intent Coverage	Presence by question family
All Providers	Derived multi-provider view — not a combined AI run
Public Discoverability	Public URL / content baseline — separate from Presence
Evidence	The monitored question + response (+ citations) behind a fact

11. Sharing tip

When you circulate a finding internally, always include:

1. Filters (Geography · Provider · Language · Brand)
2. Last monitored date
3. The on-screen section where you found it
4. One Evidence example

Separate **observation** from **recommended action**.

Brand AI Visibility · Dealality Help Center *Aligned to the live Executive Summary and Detailed View page structure.*
